CONCRETE
PUMP SUPPLY

PRIME-A-PAC

PRIME-A-PAC

America's original pre-packaged concrete pump primer

FEATURES & BENEFITS

ENVIRONMENTAL formula is 100% organic

ECONOMIC less expensive than buying, mixing and transporting Portland Cement

EFFICIENT closest substitute for cement slurry mixes

SIMPLE easily mixes with water for ease of use

EFFECTIVE has the most dependable results reported from operators of boom and line pumps

PACKAGING OPTIONS

18 EACH	2-LB. PACKETS PER BOX
18 EACH	2-LB. PACKETS PER PAIL
180 EACH	2-LB. PACKETS PER DRUM

INSTRUCTIONS

1 Prepare the Prime-A-Pac mix.

- Pour 1 packet of Prime-A-Pac into a container of 5 Gallons of water.
- Stir this mixture for 1 minute, or until the material has thickened.
- Let the mix stand for at least 15-30 minutes.
- The mix can stand for longer before use, but it should be stirred again if left overnight.

2 Prime the Pump

- If the pump has a priming port (CAPS): Pour the Prime-A-Pac mix into the primer port just ahead of the ready-mix concrete.
- If primed directly from the hopper: Pour the Prime-A-Pac mix into the hopper, so the mix is charged in the system ahead of the ready-mix.

HOW MUCH PRIMER SHOULD BE USED?

One packet of Prime-A-Pac mixed with 5 Gallons of water will successfully prime 150 ft. of 5" system. Horizontal or downhill pumping jobs may require more priming mix. Place a ball ahead of the mixture to ensure all interior surfaces are completely coated. Prime-A-Pac primer provides lubrication for pipe and hose. Concrete Pump Supply recommends "priming out" before continuing with a pour.
